Contactless characterization of a high Tc superconductor

$T_c(\text{onset}) = 96$ K, $T_c(\text{zero}) = 66$ K, and Films fired for shorter or longer times at 1000 °C were of poorer quality. The large transition widths of those fired for longer times may be due to the interdiffusion of aluminum into the superconducting film, as reported by other researchers (refs. 5 and 16).

Synthesis and Characterization of High-Tc Screen-Printed Y

This is one of the direct reading results. Studies show that engaging in reading and character challenges in this book brings a sense of identification and consequent empathy for the efforts of others. "Signed : Raj Mohan B., G. Laser Processing and Characterization of High-Tc

Coplanar transmission lines made from high-Tc superconducting thin films are investigated theoretically. A full wave analysis is performed for the coplanar waveguide structure by a partial wave synthesis. For modeling the superconducting behavior the two- fluids model and the London theory are applied. The authors use two ways of analysis.
