the chemical composition [17,3] and consequently the nutritional and toxicological properties of the final products. Furthermore, while chemical composition of algae has been the subject of increasing attention, seldom, have extensive chemical analysis of commercial products been performed. In this paper, the chemical composition of Spirulina

There are hundreds of reports on the chemical composition of plant material. In reviewing this vast amount of data, it becomes apparent that the analytical procedures used, in many cases, are different from lab to lab, and a complete description of what procedure was used in the analysis is not clear. For example, many reports do

Chemical composition of sediment can be determined by methods of rock analysis in which all constituents are rendered soluble by strong acid treatment or fusion. The composition may be expressed in mineralogic terms, generally by identifying species present by optical methods or by X-ray diffraction.

CHEMICAL ANALYSIS OF MINERALS There are many different types of both qualitative and quantitative analysis available to mineralogists and petrologists. Specific techniques are chosen based on the goals of the researcher and the characteristics of the samples being studied.

Chemical analysis on the samples revealed that fermentation and increasing pod storage resulted in consistent decreases in ash (minerals), protein and fat content of the beans while carbohydrate content increased with both treatments.
