GMT corrosion resistance part b corrosion pdf - Corrosion is a natural process, which converts a refined metal to a more chemically-stable form, such as its oxide, hydroxide, or sulfide. It is the gradual destruction of materials (usually metals) by chemical and/or electrochemical reaction

Corrosion & Corrosion Resistance Galvanic Corrosion The issue of corrosion poses an extreme concern in design. One of the first questions a designer must address when analyzing a fastener application is whether the fastener will be subjected to a corrosive attack during service. It is important to understand that

The corrosion resistance of heat treatable AlMgSi-type alloys, which normally have the best corrosion resistance in the hot-aged state, on the other hand, is adversely affected by the heat of welding, and the same applies for AlZnMg alloys.

Corrosion-resistant alloys:-Stainless steels are iron-based alloys containing a minimum of about 10.5% chromium; this forms a protective self-healing oxide film, which is the reason why this group of steels has their characteristic "stainlessness" or corrosion resistance. There are four classes of stainless steels that are
