In a noisy channel, the BER is often expressed as a function of the normalized carrier-to-noise ratio measure denoted E_b/N_0 , (energy per bit to noise power spectral density ratio), or E_s/N_0 (energy per modulation symbol to noise spectral density).. For example, in the case of QPSK modulation and AWGN channel, the BER as function of the E_b/N_0 is given by: $\frac{1}{4} \exp(-2 E_b/N_0)$.

Bit error rate - Wikipedia

[1] "Bit error rate" (BER) is the ratio of the number of bit errors to the total number of bits transmitted. It is a measure of the reliability of a digital communication system. The BER is often expressed as a function of the normalized carrier-to-noise ratio measure denoted E_b/N_0 , (energy per bit to noise power spectral density ratio), or E_s/N_0 (energy per modulation symbol to noise spectral density).. For example, in the case of QPSK modulation and AWGN channel, the BER as function of the E_b/N_0 is given by: $\frac{1}{4} \exp(-2 E_b/N_0)$.

Hiii, I want to tell immense thanks to owner of this dsplog for such a good and helpful hand towards sharing knowledge. I personally felt to show my feelings here that my field is Communication and doing MS in the same field, as while doing my work I get some problem and when no any book can help in finding the solution certainly my mind clicks me abt this blog to get the solution and actually ...

Rayleigh multipath channel model - dspLog

This book offers an interesting, straightforward introduction to probability and random processes. While helping readers to develop their problem-solving skills, the book enables them to understand how to make the transition from real problems to probability models for those problems.
