Generalized Fibonacci Numbers and  $4k+1$ -Fold Symmetric Quasicrystals. Authors: Carlos Castro Comments: 3 Pages. Given that the two-parameter  $p, q$  quantum-calculus deformations of the integers  $[n]_{p, q} = (p^n - q^n) / (p - q) = F_n$  coincide precisely with the Fibonacci numbers (integers), as a result of Binet's formula when  $p = \tau = \{ 1 + \sqrt{5} \text{ over } 2 \}$ ,  $q = \{ \tilde{\tau} \dots$

Scheme is a very simple language, much easier to implement than many other languages of comparable expressive power. This ease is attributable to the use of lambda calculus to derive much of the syntax of the language from more primitive forms. For instance of the 23 s-expression-based syntactic constructs defined in the R5RS Scheme standard, 14 are classed as derived or library forms, which ...

History. Historically, equations of motion first appeared in classical mechanics to describe the motion of massive objects, a notable application was to celestial mechanics to predict the motion of the planets as if

they orbit like clockwork (this was how Neptune was predicted before its discovery), and also investigate the stability of the solar system.
