In mathematics and science, a nonlinear system is a system in which the change of the output is not proportional to the change of the input. Nonlinear problems are of interest to engineers, biologists, physicists, mathematicians, and many other scientists because most systems are inherently nonlinear in nature. Nonlinear dynamical systems, describing changes in variables over time, may appear ...

Control theory in control systems engineering is a subfield of mathematics that deals with the control of continuously operating dynamical systems in engineered processes and machines. The objective is to develop a control model for controlling such systems using a control action in an optimum manner without delay or overshoot and ensuring control stability.

International Journal of Systems Science and Applied Mathematics (IJSSAM) is a peer-reviewed and open access journal that provides an international forum for researchers, scholars and practitioners of systems science and applied mathematics to share experiences and communicate ideas. It is to publish refereed, well-written original research articles that describe the latest research and ...

Fig. 1 shows a long degradation process of an impending fault in a machine, where an initial defect continues to proliferate, and eventually reaches a critical condition that causes the machine failure. We can conceptualize the task of diagnostics as an in-depth exploration of the failure to identify the leading cause after it has occurred, while prognostics is to investigate the problem ...
