The recent determination of the three-dimensional structure of S1R validated the role of amino acids in the SBDLI and SBDLII regions in ligand binding (Schmidt et al. 2016), even though the overall topology of the protein was different than in the proposed model (Fig. 3.1c). Thus, use of photoprobes provided critical and accurate insight into ligand binding by an important therapeutic target in the absence of structural information.

Recent Developments of Compact Neutron Generators at LBNL The neutron yield is affected by the ion beam current density, energy, and atomic ion fraction, so the design of an ion source must address these parameters.

However, in our development project, we have succeeded in the technology to convert into small file size of PDF with keeping the image quality by separating text and photo from the scanned image, and compressing each of them separately. Conversion process of Compact PDF is as follows;. * To separate text and photo accurately from the document image.
