(PDF) Results of Aerothermodynamic and Boundary Layer

the test results of the destruction of the thermal protection material and comparison of the basic characteristics of the landing module with a front shield in the form of a cone and a spherical segment are presented.

Aerothermodynamic Benefits of Mixed Exhaust ... showed a similar trend as the cycle model results. The reason for the decrease in performance with mixing for BPR of 8 has been attributed to both reduced mixed gas temperature upstream of the common nozzle and increased mixer

Aerothermodynamic Benefits of Mixed Exhaust Turbofans

aeroshell will result in turbulent transition and unprecedented aerothermodynamic conditions (convective heat flux, surface pressure, and surface shear stress) compared to past successful Mars entries.

Aerothermodynamic Environments Definition for the Mars

within the boundary layer results in large shear stresses and convective heat fluxes at the surface. That is, the shear force, or frictional drag, is the dominant source of total drag.
