rigid and flexible pavement pdf

Flexible pavement differ from rigid pavement in terms of load distribution. In flexible pavements load distribution is primarily based on layered system. While, in case of rigid pavements most of the load carries by slab itself and slight load goes to the underlying strata.

Difference Between Flexible And Rigid Pavement

Rigid lasts much, much longer i.e 30+ years compared to 5-10 years of flexible pavements. In the long run it is about half the cost to install and maintain. But the initial costs are somewhat high.

pavement design methods, developing guidelines with a protocol for considering rigid versus flexible pavement designs when allowed alternate bids, and developing the Alternate Pavement Design Analysis Tool

Considerations for Rigid vs. Flexible Pavement Designs

This is an introduction to rigid pavement design for engineers. It is not intended as definitive treatise, and it does not encompass the design of flexible pavements. Engineers are cautioned that much of pavement design is governed by codes, specifications and practices of public agencies. Engineers must always determine the

COMPARATIVE ANALYSIS OF FLEXIBLE AND RIGID PAVEMENT DESIGN

Types of Pavements. There are two types of pavements based on design considerations i.e. flexible pavement and rigid pavement. Difference between flexible and rigid pavements is based on the manner in which the loads are distributed to the subgrade.

Introduction to Flexible Pavement Design - CED Engineering

The design models for both flexible and rigid pavements, to be mentioned in Chapters 5 and 6, require the strength of each layer of the pavement to be expressed as the elastic modulus.
