Robotic welding systems have been used in different types of manufacturing. They can provide several benefits in welding applications. The most prominent advantages of robotic welding are precision and productivity.

This book shows some contributions presented in the 2010 International Conference on Robotic Welding, Intelligence and Automation (RWIA™2010), Oct. 14-16, 2010, Shanghai, China. Welding handicraft is one of the most primordial and traditional techniques, mainly by manpower and human experiences.

And the other is robotic welding process parameters, including welding torch working angle  $\hat{\alpha}$ , welding torch walking angle  $\hat{\beta}$ , welding current  $I$ , welding voltage  $U$  and welding speed  $\hat{v}$ . The process technician can select them according to weld seam parameters, after the weld seam parameters have been decided.

Today welding vision has become important part of robotic welding system. a laser light sweeps across the joint of the part(s) being welded and the time it takes the laser to reflect to the 3-D camera head determines the location of the joint. meta-mvs.

The robotic welding system usually involves measuring and identifying the component to be welded, we- ing it in position, controlling the welding parameters and documenting the produced welds. However, traditional robotic welding systems rely heavily upon human interv- tion.
