Summer solstice occurs on the day the Sun has reached its highest/northernmost point in Earth's sky, marking the beginning of summer (in the northern hemisphere). This is around 21 June. Winter solstice occurs on the day the Sun reaches its lowest/southernmost point in the sky, marking the beginning of winter (in the northern hemisphere).

Solstice and Equinox (Suntrack) Season Model

A solstice is an event occurring when the Sun appears to reach its most northerly or southerly excursion relative to the celestial equator on the celestial sphere. Two solstices occur annually, around June 21 and December 21. The seasons of the year are determined by reference to both the solstices and the equinoxes.
