A statistical model is a mathematical model that embodies a set of statistical assumptions concerning the generation of some sample data and similar data from a larger population. A statistical model represents, often in considerably idealized form, the data-generating process. The assumptions embodied by a statistical model describe a set of probability distributions, some of which are assumed ...

In mathematics, a proof is an inferential argument for a mathematical statement. In the argument, other previously established statements, such as theorems, can be used. In principle, a proof can be traced back to self-evident or assumed statements, known as axioms, along with accepted rules of inference. Axioms may be treated as conditions that must be met before the statement applies.

Advantages of the statistical modeling approach for the calculation of glass properties: 1) Superior accuracy: Because the models are based on many datasets including various measurement techniques, systematic

errors of specific investigators can be analyzed and resolved. In often investigated composition areas the large number of data does allow a higher prediction accuracy than measurements ...
