### **What is STRIPPING THE YIELD CURVE - The Law Dictionary**

This of course would be a theoretical zero-coupon (spot) yield curve, as opposed to the market spot curve that can be constructed from yields of actual zero-coupon bonds trading in the market. The zero-coupon yield curve is also known as the term structure of interest rates.

### **The yield curve, and spot and forward interest rates**

Total 111.9528 112.5320. As you may see, even a ten-year bond may be stripped profitably, given the steepness of the yield curve. It may be purchased for \$111.95 and the parts sold for \$112.53, ignoring costs of stripping the bond, retail markups and even the indication of a capital loss on the last two cash flows!

### **Gentlemen Prefer Bonds Yields of Bonds and Strips**

STRIP quotes and zero-coupon yield. Strips are quoted in dollars and 32nds per \$100 of face value. For example, the strip maturing in May 2010 used in constructing the yield curve in the previous picture is quoted (the ask price) at 51 : 21 or  $51+21=32 = \$51:65625$  per \$100 of payment 10 years from now.

### **Fixed-income Securities Lecture 3: Yield curves**

DEFINITION of 'Stripped Yield'. Stripped yield is a measure of the non-collateralized, independent return of a bond or warrant after all the monetary incentives and features have been removed. Stripped yields measures the return on only the debt portion of a bond or warrant. The stripped yield is also called the sovereign yield.

### **Using Treasury to Measure the Yield Curve - Swarthmore Home**

The yield curve is just the yield to maturity (YTM) on a t-year (pure) discount bond graphed as a function of t. 2. Discount bonds of different maturities can have different yields to maturity. 3. The slope of the yield curve depends on the difference between yields on longer and shorter maturity bonds.

### **Bonds and the Term Structure of Interest Rates: Pricing**

yield curve to have turns only in the futures sector. When there is a year turn(s), two discount curves are constructed: one for turn discount factors and one for the discount factors calculated from the input instruments after adjustments and the discount factor at any time is the multiplication of two.
