Structural loads or actions are forces, deformations, or accelerations applied to a structure or its components.. Loads cause stresses, deformations, and displacements in structures. Assessment of their effects is carried out by the methods of structural analysis.Excess load or overloading may cause structural failure, and hence such possibility should be either considered in the design or ...

The first-order approximation to the solution of the Boltzmann--Curtiss transport equation is derived. The resulting distribution function treats the rotation or gyration of spherical particles as an independent classical variable, deviating from the quantum mechanical treatment of molecular rotation found in the Wang Chang-Uhlenbeck equation.
