A computer network is a digital telecommunications network which allows nodes to share resources. In computer networks, computing devices exchange data with each other using connections between nodes. These data links are established over cable media such as wires or optic cables, or wireless media such as Wi-Fi.. Network computer devices that originate, route and terminate the data are called ...

In modern protocol design, protocols are layered to form a protocol stack. Layering is a design principle which divides the protocol design task into smaller steps, each of which accomplishes a specific part, interacting with the other parts of the protocol only in a small number of well-defined ways.

1. Introduction. The long history of the Internet started in the 1950s following the development of electronic computers. Packet switched networks, such as the ARPANet (Advanced Research Projects Agency), were developed in the 1960s and 1970s, using a variety of protocols to join separate networks.
